"Identification and quantification of N-linked glycoproteins using hydrazide chemistry, stable isotope labeling and mass spectrometry.";
Nat. Biotechnol. 21:660-666(2003).
-!- FUNCTION: This protein is an integral component of basement membranes. It is responsible for the fixed negative electrostatic charge and is involved in the charge-selective ultrafiltration properties. It serves as an attachment substrate for cells.
-!- SUBUNIT: Purified perlecan has a strong tendency to aggregate in dimers or stellate structures. It interacts with other basement
                                                                                                                                                                                                                                                                                                  CARBOHYDRATE-LINKAGE SITE ASN-2121.

                                                                                               ino acid sequences of two mouse immunoglobulin lambda chains."; C. Natl. Acad. Sci. U.S.A. 68:590-594(1971).

MISCELLANEOUS: The MOPC 315 cell line produces 2 light chains, normal lambda-2 chain and 1 abnormal lambda-1 chain that is missing a large part of the V region. The C region sequence (sl here) appears completely normal.

SIMILARITY: Contains 1 immunoglobulin-like domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  these signals, localizes, and then participates in assembling M-line.
M-line.
TISSUE SPECIFICITY: Localizes to the middle of A-bands.
SIMILARITY: Contains 1 DBL-homology (DH) domain.
SIMILARITY: Contains 1 fibronectin type III domain.
SIMILARITY: Contains 49 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 1 PH domain.
SIMILARITY: Contains 1 PH domains.
SIMILARITY: Contains 1 SH3 domains.
SIMILARITY: Contains 1 SH3 domains.

"Identification of cDNA clones encoding different domains of the basement membrane heparan sulfate proteoglycan.";

J. Biol. Chem. 263:16379-16387(1988).

-I-FUNCTION: This protein is an integral component of basement membranes. It is responsible for the fixed negative electrostatic charge and is involved in the charge-selective ultrafiltration properties. It serves as an attachment substrate for cells.

-I-SUBUNIT: Purified perlecan has a strong tendency to aggregate in dimers or stellate structures. It interacts with other basement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Immunoglobulin on NON TER 1

Oncogene 15:691-700(1997).

-i-FUNCTION: May be involved as a regulatory protein in the transition of undifferentiated proliferating cells to their differentiated state. May also function as a cell adhesion molecule in a broad spectrum of embryonic and adult tissues.

-i-SUBCELLULAR LOCATION: Type I membrane protein.

Note=Expression developmentally regulated;
TISSUE SPECIFICITY: Widely expressed.
DEVELOPMENTAL STAGE: EXPRESSED UBIQUITOUSLY THROUGHOUT THE MID TO LATE STAGES OF GESTATION AND IN ADULT TISSUES. STRONG EXPRESSION IS OBSERVED IN THE VENTRAL REGION OF THE VENTRICULAR ZONE OF THE E15.5 MOUSE NEURAL TUBE, AS WELL AS IN THE VENTRICULAR ZONES OF THE MESSENCEPHALON AND RHOMBENCEPHALON. ISOFORMS 3 AND 4 ARE EXPRESSED AT HIGHER LEVEL COMPARED TO OTHER ISOFORMS BETWEEN E11.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBCELLULAR LOCATION: Type I membrane protein ALTERNATIVE PRODUCTS:

T "CD22, a B lymphocyte-specific adhesion molecule that regulates

T antigen receptor signaling.";

I Annu. Rev. Immunol. 15.481-504 (1997).

C -!- FUNCTION: Mediates B-cell B-cell interactions. May be involved in the localization of B-cells in lymphoid tissues. Binds sialylated C glycoproteins; one of which is CD45. Preferentially binds to C alpha2,6-linked sialic acid. The sialic acid recognition site can be masked by cis interactions with sialic acids on the same cell surface. Upon ligand induced tyrosine phosphorylation in the imune response seems to be involved in regulation of B cell antigen receptor signaling. Plays a role in positive regulation through interaction with Src family tyrosine kinases and may also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STALIC ACID BINDING.

modified and this statement is not removed. entities requires a license agreement (See or send an email to license@isb-sib.ch). the European Bioinformatics Institute. Th act as an inhibitory receptor by recruiting cytoplasmic phosphatases via their SH2 domains that block signal transduthrough dephosphorylation of signaling molecules.

1. SUBUNIT: Predominantly monomer of isoform CD22-beta. Also for the terodimer of isoform CD22-beta and a shorter isoform. Interacts with GRB2, INPPSD and SHC1 upon phosphorylation. Interacts with GRB2, INPPSD and SHC1 upon phosphorylation (By similarity). May form a complex with INPPSD/SHIP, GRB2 and SHC1.

1. SUBCRLUILAR LOCATION: Type I membrane protein.

1. ALTERNATIVE PRODUCTS:

Event=Alternative splicing; Named isoforms=2; PTM: Phosphorylated on tyrosine residues by LYN (By SIMILARITY: Belongs to the immunoglobulin superfami (sialic acid binding Ig-like lectin) family.

SIMILARITY: Contains 6 immunoglobulin-like C2-type SIMILARITY: Contains 1 immunoglobulin-like V-type d CAUTION: Ref.4 sequence differs from that shown due frameshift in position 806. Name=CD22-alpha;
IsoId=P20273-2; Sequence=VSP_002531;
ISOId=P20273-2; Sequence=VSP_002531;
TISSUE SPECIFICITY: B lymphocytes.
DOMAIN: Contains 4 copies of a cytoplasmic motif that is referred to as the immunoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in downmodulation of cellular responses. The phosphorylated ITIM motif binds to the SH2 domain of PTPN6/SHP-1. DATABASE: NAME=PROW; NOTE=CD guide CD22 entry; WWW="http://www.ncbi.nlm.nih.gov/prow/cd/cd22.htm". PTM: Phosphorylated both on threonine/serine and tyrosine Name=CD22-beta; residues SWISS-PROT entry is copyright. It is produced through a collaboratic sen the Swiss Institute of Bioinformatics and the EMBL outstation Comment=Additional isoforms IsoId=P20273-1; Sequence=Displayed seem There are no restrictions ong as its content is in to exist; . Usage by and for http://www.isb-sib superfamily. LYN (By signal transduction due SHC1 upon domain. ue to a domains. similarity). Also SIGLEC for Interacts collaboration L outstation -5 9

DISBASE: May play an important role in the genesis of artherosclerosis and rheumatoid arthritis.

artherosclerosis and rheumatoid arthritis.

SIMILARITY: Contains 7 immunoglobulin-like C2-type domains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE=74109253;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 n man.
                                                                                                                                                                                                                                                                                                                                                                                                                                             MISCELLANBOUS: The sequence shown is the Kern-/Oz-/Mcg- chain found in proteins SH, X, and NIG-64. The Kern protein has the Kern+ marker, the NEWM protein has the Oz+ marker, the Mcg protein has the Kern+ marker, and the Mcg+ marker.

MISCELLANBOUS: Six tandem lambda-type genes were identified and the 3 most 5' were sequenced. These correspond to the Mcg sequence the 3 most 5' were sequenced. These correspond to the Mcg sequence (lambda-1), the Kern-/Oz- sequence (lambda-2) and the Kern-/Oz-
                                                                                                                                                                                                                                                                                                                                                                                           SIMILARITY: Contains 1 immunoglobulin-like domain.

DOMAIN: TELOKIN BINDS CALMODULIN.

DOMAIN: TELOKIN BINDS CALMODULIN.

SIMILARITY: Belongs to the Ser/Thr family of protein kinase

SIMILARITY: Contains 9 immunoglobulin-like C2-type domains.

SIMILARITY: Contains 1 fibronectin type III domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TISSUE SPECIFICITY: ISOFORM TELOKIN IS EXPRESSED IN GIZZARD HEART, LUNG, INTESTINE, AND SKELETAL MUSCLE ALTHOUGH THE LETTEE EXPRESSION IN THE LATTER WERE MUCH LESS THAN THAT IN THE
